Michael Schill
Office of the President
University of Oregon
1585 East 13th Avenue
Eugene, OR 97403-1226

Dear President Schill:

I write to urge you to terminate your existing academic and research partnerships with universities located in the People's Republic of China (PRC) that have been overtly tasked by the Chinese Communist Party (CCP) to support Beijing's military-industrial complex.

In a speech last year in Beijing, CCP General Secretary Xi Jinping said that the PRC would "exhaust all means" to recruit intelligent and innovative professionals from around the world to support the technological development of the CCP's military, known as the People's Liberation Army (PLA). Such efforts, which include the PRC's Thousand Talents Program and its Double First-Class University Plan, are unambiguously geared towards advancing military-civil fusion (MCF), a national strategy of the CCP aimed at acquiring and developing the world's cutting-edge technology, including through theft, to achieve economic and military dominance.

In recent months, the PRC's increasingly aggressive tactics have also ensnared several notable U.S. academics and jeopardized the standing of their university patrons. This includes once-acclaimed Harvard University professor Charles Lieber, who in December 2021 was convicted in federal court on charges stemming from his illicit relationship with the PRC government. Lieber's case, and other similar convictions, raise important questions about how the United States assesses risk to its national security within its broader research enterprise. The PRC is fully integrating Chinese private industry and the PRC's civilian universities into their MCF strategy. To that end, nearly 70 Chinese civilian universities have been officially designated as part of the PRC's defense enterprise by the State Administration of Science, Technology and Industry for National Defense (SASTIND), the civilian agency responsible for funding commercial and academic research in support of the PLA's requirements. That list of 70 PLA-linked civilian universities includes at least one of your current academic partners in the PRC.

For decades, Beijing has openly exploited the expertise of Chinese students and scholars studying or conducting research in the United States to accelerate the PRC's economic and military development. For example, according to one study conducted between 2007 and 2017, the PLA reportedly sent more than 2,500 of its own scientists abroad to study and work at foreign universities. Some of these scientists travelled abroad under civilian cover so as to

obfuscate their military affiliations. After completing their studies, these scientists returned to the PRC to support the country's military-industrial complex, including its nuclear weapons program and cyber-espionage platforms. Increasingly, Beijing has also come to rely on its civilian students and researchers to enable such nefarious work. This includes formal sponsorship of promising Chinese scholars in science, technology, engineering, and math to study at American and other foreign universities, after which time they are expected to return to the PRC to provide the technological know-how and talent needed to support its defense industry.

Information available in open sources indicates that the University of Oregon maintains an academic partnership agreement with East China Normal University (ECNU) with whom it previously jointly operated a Confucius Institute. Even though the University of Oregon shuttered its Confucius Institute, it elected to maintain its academic partnership with ECNU, which according to public records, actively supports Beijing's military-industrial complex. ECNU's ties to Beijing's defense establishment are extensive. For instance, ECNU's State Key Laboratory of Precision Spectroscopy signed a joint cooperation agreement in 2018 with the vacuum technology defense laboratory housed within the 510th Research Institute of the China Academy of Space Technology, a subsidiary of the China Aerospace Science and Technology Corporation, which is a defense conglomerate with extensive ties to the PLA.⁷ To support this work, ECNU and the 510th Research Institute established a research center focused on engineering applications, with an emphasis on defense and intelligence applications. ECNU's Institute of Urban Development also maintains a cooperative relationship geared toward supporting an active MCF research center with ties to the Chinese Ministry of Science and Technology's Yangtze River Economic Belt Joint Innovation Committee.

ECNU has also been implicated in foreign interference operations. In 2020, Australia revoked the visa of an ECNU professor, Chen Hong, as part of a foreign-interference investigation conducted by the Australian Security Intelligence Organization and the Australian Federal Police. Chen had served as the director of the university's Australian studies center since 2001.

I remain deeply concerned by the PLA's aggressive campaign to infiltrate America's research enterprise. I respectfully urge you to terminate the above outlined partnership agreement, and to take steps to thoroughly vet your other academic partners in the PRC for similar risks involving the misappropriation of academic research. Thank you for your time and attention to this important matter.

Sincerely,

A handwritten signature in black ink, appearing to read 'M. Rubio', written in a cursive style.

Marco Rubio
U.S. Senator
